

SUB.CODE: 19UCH305

SUB.NAME: CHEMICAL PROCESS CALCULATIONS

CATEGORY: EMPLOYABILITY

- This is the subject where students were exposed to do the basic calculations in chemical engineering numericals.
- They also learn the units of all the terms involved in chemical process.
- Solving more problems through assignments will help students to gain more knowledge and confidence to troubleshoot the challenges placed before them.
- We need the chemical process calculations **to define the best pathway to generating the desired materials.**
- We need to be very precise in the chemical process calculations.
- Here, we apply a very unique knowledge that normally is not used at the start of a company.
- A calculation is a deliberate process that transforms one or more inputs into one or more results. ...
- To calculate means to determine mathematically in the case of a number or amount or in the case of an abstract problem to deduce the answer using logic, reason or common sense.
